Gramma-2a chain C region, membrane-bound form - mouse C;Species: Mus musculus (house mouse)
C;Species: Mus musculus (house mouse)
C;Date: 19-Feb-1884 #sequence revision 31-Mar-1991 #text_change 16-Jul-1999
C;Accession: A02154; B32657; IS7809
FPCC. Natl. Acad. Sci. U.S.A. 79, 2623-2627, 1982
A;Title: Nucleotide sequences of gene segments encoding membrane domains of immunoglobuli A;Reference number: A02154; MuID:82222190; PMID:6283537
F;243-310/Domain: immunoglobulin homology <IM3>
F;15/Disulfide bonds: interchain (to light chain) #status experimental
F;27-82,444-204,250-308/Disulfide bonds: #status experimental
F;107,110,112/Disulfide bonds: interchain (to heavy chain) #status experimental
F;180/Binding site: carbohydrate (Asn) (covalent) #status predicted

-!- FUNCTION: Staphylococcal enterotoxins cause the intoxication
staphylococcal food poisoning syndrome. The illness characterized
by high fever, hypotension, diarrhea, shock, and in some cases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -!- COFACTOR: Binds 1 zinc ion per subunit. The zinc ion is necessary for the toxin interaction with MHC class II.
- SUBUNIT: Monomer.
-!- SUBCELLUIAR LOCATION: Secreted.
-!- MISCELLANEOUS: THIS TOXIN SEEMS TO BE CODED BY A BACTERIOPHAGE.
-!- SIMILARITY: Belongs to the staphylococcal/streptococcal toxin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 "The Co-crystal structure of staphylococcal enterotoxin type A with 27-4 at 2.7-A resolution. Implications for major histocompatibility complex class II binding."; Biol. Chem. 27:132212-32216 (1996).

Note=May be the major isoform,
-!- PIM: DISULFIDE BONDS BY HOMOLOGY WITH OTHER IG GAMMA CHAINS.
-!- MISCELLANGOUS: The sequence of residues 1-335 is assumed to be identical with the corresponding region of the secreted form.
-!- MISCELLANEOUS: The a allele sequence is shown.
-!- SIMILARITY: Contains 3 immunoglobulin-like domains.

-!- MISCELLANBOORS: The sequence differs from that of the a allele, from BALB/c mice, at 15% of the positions.
-!- SIMILARITY: Contains 3 immunoglobulin-like domains.
